First and last name	Elżbieta Magdalena Wąsik
Academic title and position	Dr hab. prof. UAM
Faculty, Institute, Department/Unit	Faculty of English Older Germanic Languages and Language Evolution Research Unit
Scientific discipline	linguistics
Research areas	homolinguistics (human-oriented linguistics), language ecology, ecolinguistics, phenomenology of language and communication, cultural semiotics, functionalism, (applied) linguistic axiology
Description of scientific activity	My research interests lie within heteronomous and external linguistics. They include the study of language in cultural and social contexts, in particular, paremiological comparisons of traditionally established formulaic expressions of life truths and values, and an ecological description of minority languages (exemplified by Frisian), human-centered linguistics, that is, the ecology of linguistic communities, and the conception of the human linguistic self. Shifting my attention from language as a system of signs autonomous from its bearers to humans has allowed me to focus on the linguistic properties of individuals and group members against the backdrop of their semiotic properties in nature and culture, as well as discursive relationships that go beyond linguistic connections. By treating language as a species-specific form of human communication, I set as my primary research objective the exploration of manifestations of the self in its acts of communication and its products.
