Academic title and position

Prof. UAM dr hab.

**Faculty, Institute,
Department/Unit**

Faculty of English
Department of Psycholinguistic Studies

Scientific discipline

Linguistics

Research areas

psycholinguistics; neurolinguistics; language processing in the brain; bilingualism and multilingualism; language and social cognition; gender stereotypes and biases in language; language and emotions

Description of scientific activity

In my research, I examine how the brain processes language in the context of bilingualism, combining psycholinguistic and neurolinguistic approaches. I am particularly interested in the impact of the native and a foreign language on the comprehension of meaning, emotions, and social information, such as gender stereotypes. I focus on differences between first and second language processing, as well as on the role of affective factors. In my studies, I use experimental methods, including EEG and event-related potentials (ERPs), which allow me to track brain activity and analyze the dynamics of linguistic stimulus processing. My research also explores the relationship between language and social cognition, and how language shapes our interpretation of the surrounding world.

Activities aimed at improving doctoral supervision skills (e.g. training, workshops, and others)	I regularly participate in training sessions and workshops focused on developing supervisory competences, including planning research trajectories and supporting the academic development of early-career researchers.
