First and last name	Karolina Krawczak-Glynn
Academic title and position	Prof. UAM dr hab.
Faculty, Institute, Department/Unit	Faculty of English, Department of Cognitive Linguistics
Scientific discipline	Linguistics
Research areas	Cognitive and functional linguistics, variationist linguistics, lexical semantics, construction grammar, qualitative annotation, multivariate statistics, corpus linguistics, conceptualization of emotions
Description of scientific activity	My research interests focus on corpus-based approaches to modeling human behavior and culture. Specifically, my work examines lexico-grammatical alternations and the factors that determine the choice of one construction over another. This line of research extends directly to understanding different ways of conceptualizing our experienced world, but it can also be applied to critical questions concerning how language choices portray different social groups. My research is often multimodal and encompasses all dimensions of human communication and culture, from facial expressions and body language to lexis and grammar. All of my work is guided by a desire to understand how mind and language function in their embodied and social contexts. In this respect, my research is theoretically grounded in Functional and Cognitive Linguistics. At the same time, it remains strongly committed to empirical and, where possible, quantitative methods. I particularly focus on combining qualitative annotation of linguistic data with multivariate statistical modeling.
